The Advantages of This MULTI-SPECIALTY PRACTICE

Patients benefit from the superior training and skills of dental specialists, who have completed years of advanced education beyond that of general dentists. As highly experienced specialists, the doctors at Winterset Dental are experts in diagnostics, treatment planning and the management of complex cases.

Prosthodontists are experts in providing cosmetic and restorative dentistry such as implant treatment, crowns, bridges, dentures and more. They coordinate care for patients whose dental issues require the services of multiple dental professionals.

Periodontists are experts in the surgical placement of dental implants, the treatment of gum disease and in advanced grafting techniques to restore bone and gum tissue.

Oral surgeons are experts in implant placement, wisdom teeth extraction and surgical and related treatments for disease, injuries and defects in bone and soft tissue.

Friendly, Knowledgeable

IMPLANT DENTISTRY

Dr. Agarwal's team of dental specialists have been changing patients' lives for 45 years by providing expert care, durable, lifelike new teeth and a beautiful, confident smile.

Winerset Dental Care is a state-of-the-art practice providing expert implant and dental restoration services, including using dental implants to support single, multiple and full-arch new teeth. Patients receive care from a team of specialists, including two prosthodontists, a periodontist and an oral surgeon. "We provide high-quality dental care with genuine warmth and enthusiasm," says Dr. Agarwal. "We treat people, not just teeth."

Patients love the friendly, professional care they receive when they visit the office. "They're very down to earth," says Greg, a patient. "They answer all your questions, and it feels like home."

Improved Quality of Life With Dental Implants

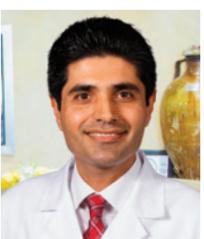

The doctors use advanced methods to replace missing or badly decayed teeth using dental implants, including fixed implant bridges to replace a full set of teeth and restore oral health and function. They often attach strong and stable new teeth the same day as implant placement.

Tanya, an implant patient, attests to the transformative benefits of a new smile. "I have a new sense of confidence. I'm able to smile and eat what I want again. The doctors gave me my life back."

Hector E. Cummings Jr., DDS
Board-Certified Periodontist

A board-certified periodontist, Dr. Cummings completed his dental specialty training at the University of Iowa College of Dentistry. He delivers high-quality patient care and takes a communication-focused approach, building a strong rapport with his patients.

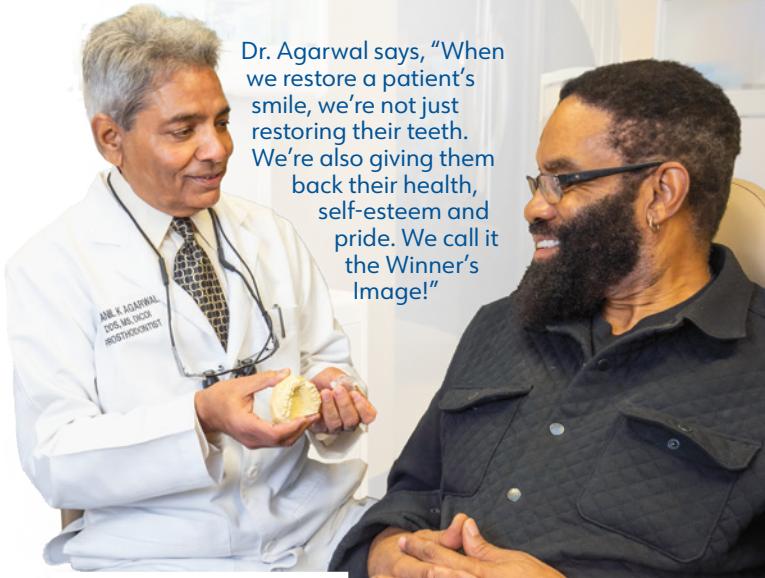

Rasoul Arbabi, DDS
Prosthodontist

Dr. Arbabi has earned a DDS degree, an MS degree and two separate degrees as a specialist in prosthodontics. He is a member of the American College of Prosthodontists, the International Team for Implantology and the Academy of Osseointegration.

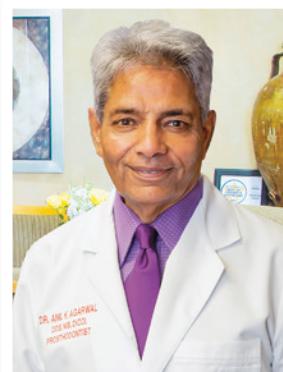

Matthew S. Hamedani, DDS
Board-Certified Oral Surgeon

A Diplomate of the American Board of Oral and Maxillofacial Surgery, Dr. Hamedani is highly trained and experienced in dental implants, reconstructive surgery, ambulatory anesthesia and more. He is on staff at multiple hospitals, and he teaches at Loyola University Medical Center.

Dr. Agarwal says, "When we restore a patient's smile, we're not just restoring their teeth. We're also giving them back their health, self-esteem and pride. We call it the Winner's Image!"

Anil K. Agarwal
DDS, MS, FAGD, FICOI, FACO, DICOI
Board-Certified Prosthodontist

Dr. Agarwal earned his DDS from King George's Medical School in 1974, graduating at the top of his class. He then completed his specialist training—as well as earning a master's degree in oral biology—from Northwestern University. A highly skilled prosthodontist, he has gone on to earn many notable distinctions in dentistry.

He is a Fellow and Diplomate of the International Congress of Oral Implantologists and a Fellow of the Academy of General Dentistry and the Academy of Osseointegration.

Dr. Agarwal's training has equipped him to handle advanced and complex reconstruction cases. He has taught other dental professionals and lectured worldwide on dental implants and comprehensive dental restoration for the past 45 years. He has invented unique dental products and authored four books.

Founder, Implant Educational Center at Northwestern University

In addition to teaching implant courses at Northwestern University for over two decades, Dr. Agarwal co-founded and served as Director of the Implant Education/Educational Center and served as Director of Clinics and Treatment Planning Center Director at the university. He received the Northwestern University Alumni Merit Award in 2008.

Restore Your Smile and Chewing Power! Replace Missing Teeth With **DENTAL IMPLANTS**

Dr. Agarwal and his implant team are specialists with 45 years of experience and expertise placing dental implants and replacement teeth.

The doctors use the latest methods, technology and materials to restore their patients' smiles, health and confidence.

Patients with missing or ruined teeth can chew, eat and smile again, thanks to modern dental implants. "Implants are the best thing that ever happened in dentistry," says Dr. Agarwal. "Implants do more than just improve patients' appearance and ability to chew, they also improve quality of life. Because patients can chew better, they can eat healthier. Patients also regain their confidence, and they smile and enjoy life more."

An Experienced Team of Certified Specialists

In addition to being a prosthodontist, Dr. Agarwal is a Fellow and Diplomate

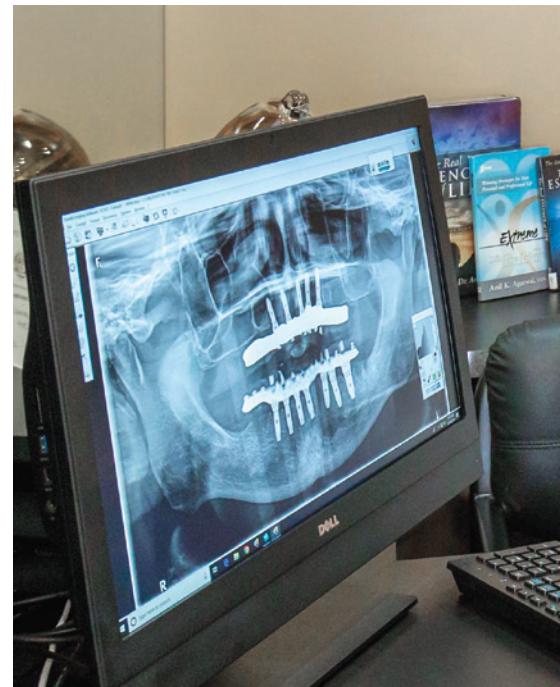

of the International Congress of Oral Implantologists. He plans and executes implant treatments in collaboration with the other specialists at the practice.

Prosthodontists are experts in planning complex cases. For more extensive implant cases, such as replacing a full arch of teeth, Dr. Agarwal and Dr. Arbab work with Dr. Cummings, the practice's board-certified periodontist, and Dr. Hamedani, a board-certified oral and maxillofacial surgeon with many years of experience in implant surgery.

"All our doctors are specialists in the placement of implants and the creation of new teeth," says Dr. Agarwal. "This knowledge and expertise—from implant planning to finished new teeth—allows us to deliver a higher level of care to our patients, all from a single office."

Precise Implant Planning for Perfect Placement

The doctors use advanced 3D technology to make the procedure efficient and minimally invasive, and to ensure the accuracy of implant treatment. Using a state-of-the-art 3D CT scanner, they

capture detailed 360-degree X-rays of the patient's entire mouth and jaw. 3D software allows the doctors to map out the exact position of each implant, simulating the entire procedure. If needed, the doctors create a surgical guide to use during the procedure to aid in implant placement.

Comfortable, Relaxed Treatment

Patients are provided with various amenities to ensure they are comfortable and relaxed at all times, including pillows, blankets, water and music. For fearful or anxious patients, IV sedation and deep sedation are available.

Before treatment begins, the doctors explain the entire procedure, answering any questions. "They're all very reassuring," says Tanya, a dental implant patient. "They give very detailed explanations of the entire process and make you feel so comfortable."

Natural-Looking, Fully Functional New Teeth

With their specialized training in both

"The staff was friendly and professional. Very informative and comforting. Any fears I had were removed quickly. I've been to a lot of dentists in my lifetime, and I must say Winterset Dental, in my opinion, is one of the—if not the—best."

—Calvin, extractions and dental implants

The practice's 3D CT scanner uses low-radiation X-rays to capture 3D images of the entire mouth and jaw area for treatment planning.

DENTAL IMPLANT TREATMENT IN ONE OFFICE

Winterset Dental's team of dental implant specialists provides patients with treatment in one office, from diagnostics and planning to the final new teeth.

implant placement and the creation of new teeth, the doctors are experts who know how the new teeth should look and function. The crowns, bridges or dentures that will attach to the implants are fabricated using a certified dental lab, which uses only high-quality materials to ensure long-lasting comfort and fit. All technical and quality control is overseen by an expert lab technician.

The new teeth look, feel and act like natural teeth. "You can't tell I have them," says Winnie, an implant patient. "They look perfectly normal."

Benefits of Dental Implants

Compared with other tooth replacement options, dental implants are the most reliable, longest lasting and most realistic-looking option for replacing missing teeth.

Implants provide excellent chewing power, allowing patients to eat a wide variety of the foods they enjoy and need for a proper diet and good health. They also help prevent the bone loss and

prematurely aged appearance that results from leaving teeth missing (see page 8).

The Winner's Image

Implant treatment not only alleviates pain and discomfort, it also boosts patients' self-esteem and gives them greater confidence during social and professional interactions.

Mike, a patient who came to the practice with his teeth in bad shape, can vouch for the benefits of dental implants. "It's changed my life," he says. "I can eat anything, and my new teeth look great!"

Affordable Implant Options

Patients who need teeth replaced receive comprehensive implant treatment with no added costs. This includes the implants and all temporary and final restorations. The practice has competitive pricing and offers flexible payments and interest-free financing options to make it easy for patients to get the dental care they need.

The doctors explain each phase of treatment using language and terms that are easy to understand.

Implant-supported teeth look and feel like healthy natural teeth.

ALL-ON-X

Implant-Supported Full-Arch Teeth Replacement

All-on-4® treatment concept
Center of Excellence

The highly trained specialists at Winterset Dental Care have successfully placed implants and beautiful replacement teeth for thousands of patients. Because of their skill and experience in full-arch cases, the doctors have been recognized as a "Center of Excellence" by industry leader Nobel Biocare™.

Patients with dentures, many missing teeth or teeth that are beyond saving can receive a full set of beautiful, lifelike new teeth designed and placed by the dental implant specialists at Winterset Dental. The doctors provide permanent, full-arch teeth replacement with All-on-X. The replacement teeth feel, look and function just like natural teeth and, for many patients, the entire procedure can be completed in just one day.

Award-Winning Practice and Dental Implant Professionals

Winterset Dental is one of only two

practices in the entire greater Chicago area honored with "The Center of Excellence Award" by Nobel Biocare—the premier provider of dental implant systems—recognizing the practice's experience and expertise in All-on-X treatment. Between them, the doctors have extensive training and experience replacing missing teeth and treating the gum tissue and bone that support teeth. As prosthodontists, Dr. Agarwal and Dr. Arbabi are experts in cosmetic dentistry—they make sure the new teeth are correctly positioned to be functional, and look natural and aesthetic.

"We are rigorously trained in replacing teeth," says Dr. Agarwal. "We use the best methods and materials, and take our time to craft new teeth that not only look aesthetically pleasing but are correctly aligned and comfortable. Nothing is finalized until the patient is completely happy with them."

No Added Cost for Additional Implants

Some procedures use four implants per arch, but the number of implants placed can vary depending upon the availability of sufficient bone and the treatment goals. "More often, we place five or six

The doctors and patient work directly with the quality control manager to get the exact look and feel for the new teeth.

I'm 71 and work full time and, with my new teeth, I have a new outlook on life. It's like getting a facelift!

—Joyce

in an arch," says Dr. Agarwal. "We use the number of implants that will give the patient strong and stable teeth. No matter how many implants are placed, the price for the procedure remains the same."

Successful Full-Arch Treatment

The extensive planning the doctors do is key to the success of providing All-on-X. Using a state-of-the-art 3D CT scanner, they take 360-degree views of the patient's mouth and jaw to identify the areas of densest bone and determine the best locations to place the implants.

The doctors then use implant-planning software to simulate the entire surgery ahead of time and can even create a surgical guide, which is placed over the gums during the procedure to ensure implants are placed precisely.

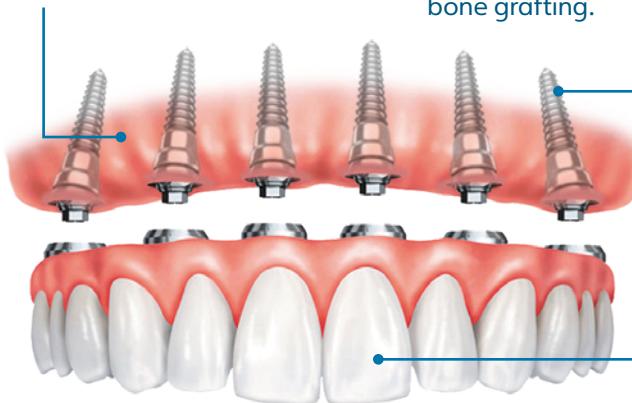

The implants are placed in areas of dense bone in the jaw. They may be placed at an angle to provide optimal stability and minimize the need for bone grafting.

The doctors recommend the best treatment option and answer any questions the patient may have.

All-on-X Full-Arch Teeth Replacement

Four to six implants are placed in areas with an adequate volume of dense bone for maximum support.

Long, angled dental implants maximize bone-to-implant contact and increase stability, often eliminating the need for bone grafting.

The new teeth are made out of durable and natural-looking materials. They are crafted into one unit so the load is evenly distributed and chewing power is strong.

Increased Chewing Power and Beautiful New Teeth

For most patients, the doctors attach provisional new teeth during the same visit as the implant surgery. These temporary teeth look lifelike and are fully functional. After the implant sites heal, the final teeth are placed, providing patients with close-to-natural biting and chewing strength.

Joyce (featured on the opposite page) says, "Dr. Agarwal even brought the lab technician into the office to make sure he understood what I needed."

The strong and stable new teeth give patients the ability to eat nutritious foods

they may have had trouble chewing before, relief from dental pain and the embarrassment of missing and broken-down teeth, plus renewed confidence and quality of life.

Affordable Full-Arch Treatment

Winterset Dental has competitive prices and all-inclusive packages. Treatment includes all implants, the temporary and final new teeth, a nightguard and one year of complimentary maintenance.

The practice also offers several flexible payment options with interest-free or low-interest financing for qualified patients.

The Benefits of ALL-ON-X

- The Winner's Image—a beautiful new All-on-X smile immediately improves self-confidence and quality of life!
- Nearly everyone is a candidate for treatment, regardless of bone loss.
- Patients get back nearly full natural chewing power. Restored chewing ability keeps the bone stimulated, preventing bone loss and the eventual collapse of the lower part of the face.
- Patients receive stable, fixed-in teeth that never need to be removed. The new teeth can be maintained with regular oral care.
- The entire procedure can often be completed in one day, including any extractions, implant placement and attaching the new teeth.

The Advantages of DENTAL IMPLANTS

The doctors are experts in dental implant treatment and the creation of strong, natural-looking replacement teeth. They give their patients beautiful new smiles.

A mouth full of damaged or missing teeth affects one's appearance, self-esteem and ability to eat many of the foods needed for a healthy diet.

Drs. Agarwal, Cummings, Arbabi and Hamedani have years of collective knowledge, training and expertise and have successfully used dental implants to complete thousands of smile makeovers. And, while function and health are the number one priority, they make sure that the treatment results in a beautiful smile.

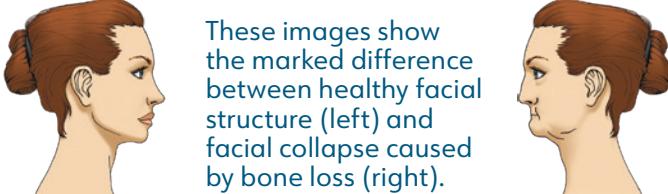

Implant-supported teeth look, act and feel like natural teeth—people usually don't notice any difference between their natural teeth and their implant-supported teeth.

"My new teeth feel like my regular teeth!" says Gwendolyn, an implant patient. "I can smile and I don't have to take things in and out."

Missing Teeth = Bone Loss

Failure to replace missing teeth—and wearing dentures—results in bone loss. Without the stimulation of full-force chewing, bone gradually reabsorbs back into the body.

Wearing dentures escalates this process, due to the constant friction of the denture on the bony ridge. Eventually, so much bone is lost that the lower part of the face recedes. The chin moves toward the nose, and the mouth and cheeks sink in, causing facial sagging, deep wrinkles and folds and a prematurely aged appearance.

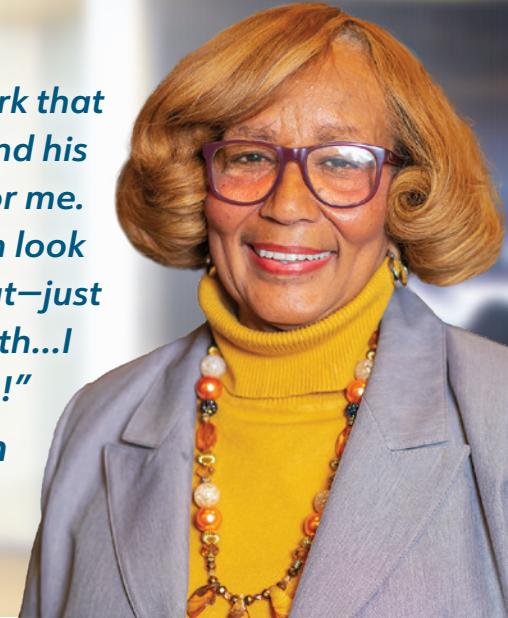

These images show the marked difference between healthy facial structure (left) and facial collapse caused by bone loss (right).

Dental Implants Are the Solution

Replacing missing teeth with dental implants solidly anchored into the jawbone prevents this bone loss from occurring. The implants and the chewing force they provide keep the jawbone stimulated and healthy. Patients can once again enjoy carefree eating, talking and smiling.

"I love the work that Dr. Agarwal and his team did for me. Now my teeth look and feel great—just like natural teeth...I can smile again!"

—Gwendolyn

Dr. Agarwal Answers Your Questions About Dental Implants

What is a dental implant?

"Dental implants are artificial tooth roots made of titanium. We place the implant in the jawbone and attach a crown, dental bridge or denture."

Is the procedure painful?

"Most of our patients report little to no discomfort. They often return to work and their usual activities the next day. We're committed to patient comfort, and we offer IV and deep sedation, as needed."

What success rate can I expect?

"For a healthy individual with good oral hygiene and good health, dental implants have a predictable success rate above 95%."

How long will they last?

"We offer a 10-year guarantee on patients' implants, but this is rarely needed. With proper care, dental implants have been proven to last over 40 years."

Will they look like normal teeth?

"The teeth attached to dental implants are fabricated using only high-quality materials that look, feel and function like natural teeth."

Have You Been Told You're Not a Candidate For Dental Implants?

Dr. Agarwal has a solution very few dentists offer—he can provide **ZYGOMATIC IMPLANTS** for patients who have been told they don't have enough bone for implant treatment.

Gum disease, smoking, leaving teeth missing and wearing dentures can all contribute to bone loss. Patients who have suffered bone loss in the jaw may not be eligible for traditional dental implant treatment, but this doesn't mean there is no hope for getting a stable smile. Using zygomatic implants, an advanced form of implant treatment, the doctors at Winterset Dental can restore full function and beauty, even for patients who have been wearing dentures for a long time.

A Stable Foundation for Full-Arch Teeth Replacement

When bone in the upper jaw is insufficient to support dental implants, Dr. Agarwal can place extra-long, angled implants in the cheekbone (zygomatic bone), where the bone volume remains dense even when teeth have been missing for a long time. He can then attach a full arch of natural-looking replacement teeth—a strong and long-lasting solution for patients who have extensive bone loss.

In use for over 20 years, zygomatic implants have been proven safe and effective and can be placed without the need for bone grafting or sinus lifts, which can add months to the treatment time of traditional implants. The zygomatic implants integrate with the bone and are so strong that a full set of replacement teeth can usually be attached right away.

With new teeth firmly fixed to the zygomatic implants, patients are able to stop worrying that their teeth will slip or fall out. They can enjoy a wide variety of foods they couldn't eat with dentures, and they can once again smile with confidence.

Zygomatic implants use the patient's cheekbone to provide a stable foundation for a full arch of teeth—without bone grafting.

Why Dr. Agarwal Recommends DENTAL IMPLANTS

- Patients regain confidence and enjoy a better quality of life.
- Implants are the strongest and longest-lasting tooth replacement solution, and they can last a lifetime with proper care.
- Implant-supported teeth can be brushed and flossed just like real teeth and are easy and inexpensive to maintain.
- Patients can talk, chew and exert pressure—without pain or embarrassment—just like with natural teeth.
- Restored chewing power means patients can eat what they want, including the foods they need for a healthy diet.
- Implant-supported dentures have no false palate covering the roof of the mouth, which means patients can better taste their food and speak more clearly.
- Implants don't require cutting down of healthy neighboring teeth, whereas traditional dental bridges require adjacent teeth to be modified.
- Implants help to stimulate bone and prevent bone loss.

Real Patient Stories

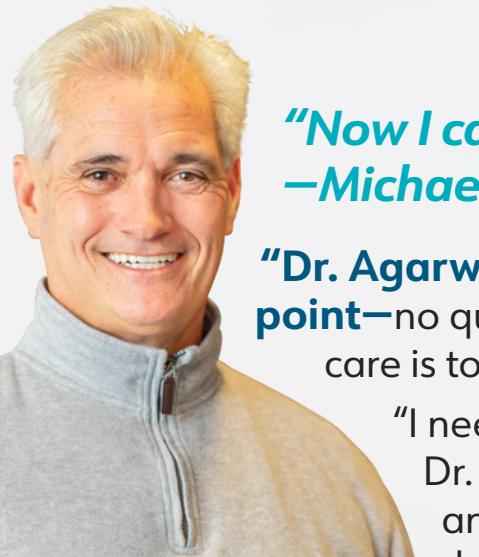

Google Over 600 5-Star Google Reviews

"Winterset Dental has given me a lifetime of smiles that help me show off my dimples." —Helen

"The doctors clearly explained my treatment options and were patient with helping me overcome my fears of the procedure.

"I'm a nurse, and my smile is my welcome card. I can now speak with clear diction and with a smile—I no longer have to cover my mouth or hide my teeth. I can eat what I like without having to strategically place food in my mouth just to chew."

—Helen, full lower implant bridge

"Now I can chew and smile again."
—Michael

"Dr. Agarwal is very direct and to the point—no question goes unanswered. Patient care is top for him.

"I needed extractions and implants, and Dr. Agarwal explained the procedure and exactly how he'd do it from beginning to end in language I could understand. I felt confident."

"Everything feels as if I had been born with all the work done already."

—Michael, extractions and implant bridge

"The doctors are great—very knowledgeable and caring."—William

"My treatment at Winterset Dental was top-notch. Dr. Agarwal is empathetic, sincere and a man of his word.

"Another dentist quoted me a price for implants, then increased it by \$5,000 out of the blue.

Dr. Agarwal quoted me a price and stuck to it. He doesn't do anything you're not aware of, and there are no added expenses.

"Winterset Dental is really a cure-all for getting a wonderful smile. I hold high expectations for my appearance, and I am happy to have a dentist who shares my concerns. Their impact on improving your quality of life is fantastic. I am happy now, and I enjoy speaking engagements and being up front as I always did. But now, I am much more comfortable!"—**William, implant bridge**

my appearance, and I am happy to have a dentist who shares my concerns. Their impact on improving your quality of life is fantastic. I am happy now, and I enjoy speaking engagements and being up front as I always did. But now, I am much more comfortable!"—**William, implant bridge**

"Dr. Agarwal was honest, and he explained everything he was going to do beforehand."
—**Gwendolyn**

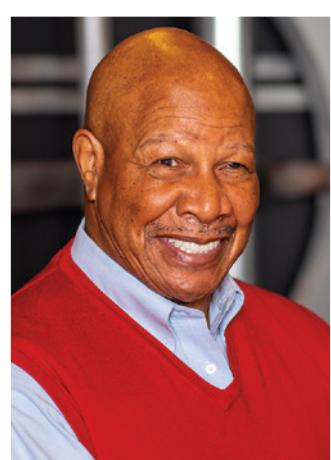

"This is the best dental experience I've had in my entire life."—Joyce

"Dr. Agarwal is very warm, caring and honest. He listens to fully understand your problems.

"His work is excellent, and he stands by it. It has improved my life beyond my expectations. I even got a new job due to my self-confidence.

"I love this place. Everyone is like family."

—**Joyce, full implant bridge**

"My periodontal issues are now resolved, and I have the best smile I've ever had."—Ronnie

"I have a long history of periodontal problems, and when I came to Winterset Dental, my teeth were in bad shape. I wanted implants, top and bottom.

"Dr. Agarwal and his team treat you like family and are professional at the same time. They have a team of specialists, and all are great at making you comfortable, minimizing any discomfort and following up to make sure you're not in pain. With Dr. Agarwal, there's no pretension or disguise. He's naturally gifted and humble."

—**Ronnie, full upper and lower implant bridge**

"When I came to Dr. Agarwal, my teeth were in terrible shape. My previous dentist's work had all fallen out, leaving me with big gaps and gray teeth.

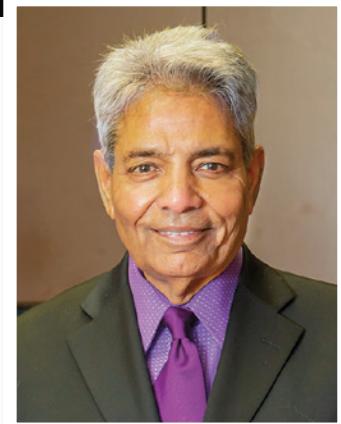

"I wanted my teeth to look natural. I teach school and can't have my teeth looking like they did. I wanted implants, but my dentist wouldn't do it. I decided to visit Dr. Agarwal as he'd done my husband's teeth, and they came out perfect.

"I just love Dr. Agarwal and his whole team. I had a fear of the dentist to the point that I would pass out, but he made me feel so good. He treated me gently and listened to my concerns. I stopped being afraid and actually looked forward to getting my teeth worked on.

"I never felt any pain during treatment. I have no soreness, and I can smile again."

—**Gwendolyn, full upper and lower implant bridge**

The multi-disciplinary team at Winterset Dental works together to develop a successful treatment plan for even the most complicated cases.

Board-Certified Prosthodontist

and worried about what will happen next. We care about your needs. We will work with you to provide solutions that fit your unique concerns and get you to your goal—a healthy, beautiful smile that will last a lifetime. So, how do we make that happen?

We Listen to You

At your consultation, you'll be seen promptly. We'll talk with you about what's on your mind. We'll ask about your history and use comfortable, efficient equipment to get the diagnostic information we need. We will take the time to explain your options without using frustrating or confusing dental jargon.

Your new smile starts with our team of skilled dental professionals. While many dentists can treat patients

A Message From Dr. Agarwal “How can we help you?”

Getting you the help you need starts with that simple question. We welcome you without judgment. We understand that you are in pain, self-conscious about the condition of your teeth

with multiple missing or broken teeth, our doctors are specialists dedicated to this care. Whether your needs are simple or complex, we provide effective treatments that work with your life, your priorities and your budget. Our purpose is to make sure you can smile without hesitation and chew without pain. You can look and feel younger and enjoy an improved quality of life—we can give you what we call the Winner's Image.

A Team of Dedicated Specialists

As experts from multiple disciplines—including prosthodontics, periodontics and oral surgery—our doctors are extensively trained in all aspects of replacing and restoring missing or decayed teeth. This includes the use of implants, crowns, bridges, dentures and gum disease therapy.

Our experience and expertise give us a unique understanding of smile dynamics and the health of your mouth. Using the latest techniques and methods, we can treat even the most complex dental problems and restore the function and aesthetics of your smile.

I hope you will call today and schedule your consultation. Let's get you started on the path to dental health.

PATIENT COMFORT AND SEDATION

Dr. Agarwal and his team are dedicated to ensuring patients feel comfortable and relaxed throughout their visits.

They provide a calming, stress-free environment, explain procedures in detail and answer any questions. And, with sedation, even the most nervous patients can experience treatment without fear.

Because the doctors want everyone to receive the dental care they need, they go to great lengths to ease the anxiety and fear that often cause people to avoid visiting the dentist.

"Our purpose is to provide high-quality dental care that goes beyond ensuring comfort during procedures," says Dr. Agarwal. "It starts with making patients feel comfortable and relaxed from the moment they walk through the door."

To make patients feel at home, the practice provides an inviting, comfortable reception area with modern furnishings and private consulting rooms and operatories. The doctors and staff treat each patient like family, taking the time to fully explain procedures and answer any questions they may have. Pillows and blankets are available for patient comfort, as well as music and TV in every room to provide a more relaxing experience during procedures.

Sedation Options for a Stress-Free Experience

For patients who are anxious or need further help relaxing during dental procedures, qualified members of Dr. Agarwal's team are trained to administer appropriate sedation, as needed. Patients who receive sedation often say they felt no pain and have no memory of the procedure!

With IV sedation, the patient receives the sedative medication through an IV. The medication induces a deeply relaxed, sleep-like state from which the patient can be easily awakened.

The practice offers general anesthesia for treatments requiring the patient to be fully asleep. A qualified medical doctor administers the anesthetic and monitors the patient throughout the procedure.

Patients who receive sedation will need a licensed driver over the age of 18 to drive them home.

Winterset Dental's expert prosthodontists are skilled in the art of creating quality replacement teeth—including full-arch dentures—for great fit, function and comfort.

Implant-supported teeth are a strong, long-lasting alternative to traditional dentures.

“Crafting quality, good-looking dentures is an art and a science,” says Dr. Agarwal. “To ensure the best fit, comfort and aesthetics, we record the patient’s smile, lip line and speech patterns and take impressions and jaw measurements.”

The doctors are highly trained in creating dentures. Prosthodontic specialty training includes the creation of well-fitting, well-functioning and attractive dentures. The doctors fabricate the final teeth from high-quality materials known for their strength and aesthetics. The dentures are made by a certified dental lab technician they’ve worked with for over 40 years. “We don’t finalize the denture until the patient is completely happy with it,” says Dr. Agarwal.

The Problem of Missing Teeth

When teeth are missing and not replaced, the bone that supported the

HIGH-QUALITY DENTURES *Made by Specialists*

roots gradually reabsorbs. Without the stimulation of full-force chewing, bone loss continues, which leads to facial structure collapse and dentures that are loose and uncomfortable, requiring periodic readjustment.

Implant-Supported Teeth: The Ideal Solution

Dr. Agarwal’s team provides implant-supported full-arch bridges, which solve the issue of progressive bone loss. The doctors can often provide a full arch of new teeth in just one day (see page 6).

With implant-supported teeth, the doctors place up to six implants per arch for maximum stability and strength. The new teeth are then attached directly to the implants. Because the teeth are securely anchored to dental implants, there is no slippage, stronger chewing power is restored and further bone loss is prevented. The lower denture won’t slip or fall out when the patient is eating or speaking. With no false upper palate, implant-supported bridges allow patients to taste food again and speak normally.

“Implant-supported bridges are life-changing on many levels,” says Dr. Arbabi. “We want all our patients to be able to

experience this increased quality of life.” Patients who receive dentures at the office have the option of returning to upgrade to implant-supported bridges. The entire cost of their conventional dentures is applied to the implant-supported new teeth.

A Stable, Beautiful Smile

The teeth are comfortable and look natural and aesthetic. Patients often say they can’t tell the difference between their new teeth and when they had healthy natural teeth. Ronnie, who received full upper and lower implant-supported bridges, says, “I have the best smile I’ve ever had.”

The doctors at Winterset Dental provide treatment plans with the patient’s budget in mind and offer interest-free financing options for qualified patients. They will even apply 100% of the cost of dentures to future dental implant treatment.

Replace one or more missing teeth or teeth beyond repair with permanent implant-supported new teeth. See page 4.

Full-Arch Dental Implant Treatment With All-on-X

All missing, broken and bad teeth replaced with a stable, functional, natural-looking and permanent fixed implant bridge. See page 6.

Solutions for Bone Loss

Restore the volume and density of the jawbone to ensure strong and stable implant placement.

Specialty Dentures

High-quality dentures made by prosthodontists using specialty techniques and materials. The total cost of dentures can be applied to future dental implant treatment. See page 14.

Sedation Dentistry

For patients who need extra help with dental anxiety, and for long procedures, the doctors offer sedation services. See page 13.

PAYMENT OPTIONS

- The office accepts cash, checks and most major credit cards.
- Flexible interest-free and low-interest financing options are available for qualified patients through CareCredit®, Proceed Finance, LendingClub and Alphaeon Credit®.
- The practice works with many dental insurance plans and will help you receive the maximum benefits possible.

IN THE COMMUNITY

Giving back to the community is an important part of Dr. Agarwal's philosophy. In 2000, he donated a fully equipped dental office to the Family Health Society in Chicago. Over 21,000 people—and counting—have been treated at this volunteer clinic. The practice also does food drives and distributes winter coats. Dr. Agarwal was even awarded a plaque for his community service by Mayor Daley.

Missing Teeth? Badly Decayed Teeth?

Get durable, natural-looking new teeth with dental implants!

Patients with missing teeth or teeth that are beyond repair can receive durable, realistic new teeth that restore near-natural chewing strength. Dental implants are designed to look, feel and function like natural teeth and, with proper care, they can last a lifetime.

With more than 45 years of implant experience, Dr. Agarwal has helped thousands of patients enjoy the life-changing benefits of dental implants.

See page 4 for more info.
